

Shitty LAMP stack

GitHub: [https://github.com/GSCloud/shitty_lamp_stack]

Run deprecated LAMP stack applications.

Usage

- **make** → CLI help

Install

- run ```make install``` to install minimal set
- run ```make everything``` to install simply everything - for a clean new install incl. extensions
- use the included Apache 2 configuration to run this on a real site through proxying (TLS certificates needed)
- uncomment TLS verification commands if using Authenticated origin pull
- don't forget to run ```a2enmod proxy``` command on the host
- use PMA or Adminer to import MySQL data

Remove

- run ```make remove```
- persistent data remains in the data storage (see below)

Clean

- run ```make clean```
- removes database storage permanently

Configuration

- configuration directives for Docker → **.env**
- extra configuration directives for PHP → **limits.ini, uploads.ini, timezone.ini**

Data storage

- **Application** storage → **app/**
- **MySQL** database storage → **db/**
