

# Shitty LAMP stack

GitHub: [[https://github.com/GSCloud/shitty\\_lamp\\_stack](https://github.com/GSCloud/shitty_lamp_stack)]

Runs old days LAMP stack for deprecated applications.

## Usage

- **make** → CLI help

## Install

- run ``**make install**''
- use the **Apache 2.4 conf** to run this on a real site through proxying

## Uninstall

- run ``**make remove**''
- persistent data remains in data storage (see below)

## Configuration

- configuration directives for Docker → **.env**
- extra configuration directives for PHP → **uploads.ini**

## Data storage

- **App** application storage **./app**
- **MySQL** database storage **./db**
